

## Maintenance of Driveways

- **Asphalt Driveways:**  
As a reminder, asphalt driveways should be seal-coated every couple of years to protect the surface and to extend the life of the driveway. The cost is minimal and provides protection against early deterioration of the surface and underlying structure due to water infiltration. Please maintain your driveway to help keep our community looking its best.
- **Paver Driveways:**  
The Spring and Summer Seasons are also good times to assess the condition of paver driveways. Periodically, a power washing and re-sanding may be needed to keep the pavers in great shape, and to attend to any weeds and moss that have developed between the sand joints and in crevices.
